

# Viz Extension Fundamentals

# Agenda

What is Viz Extension?

Recommended Prerequisites

Anatomy of a Viz Extension

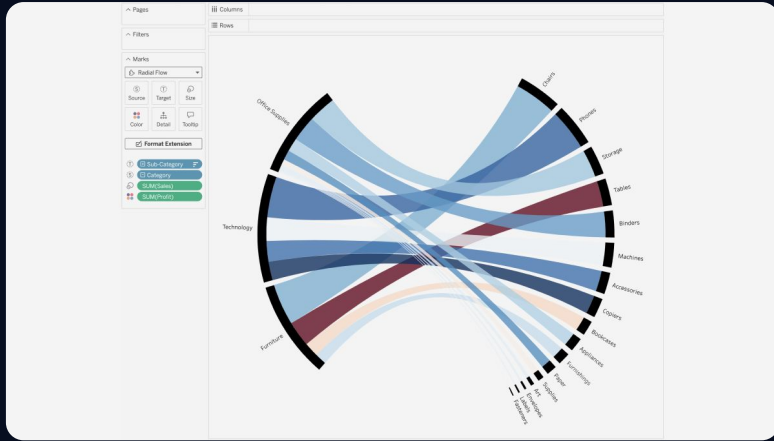

Mission & Data

Step-by-step developing process

Q&A

# What is Viz Extension?

Viz Extensions are web applications that can extend the native visual capabilities of Tableau. Viz Extensions give users the ability to interact with custom viz types on their worksheets.

# Recommended Prerequisites

- Familiarity with Javascript
- Familiarity with D3 or another JS library that can be used for charting, or ability to pick it up using docs and examples
- Basic understanding of SVG (namely Path elements)
- Ability to follow prompts for command-line scripting
- Experience creating visualizations in Tableau using the Mark Cards

# Anatomy of a Viz Extension

## .trex

an XML file that describes the extension and provides information to register the extension with Tableau

## .html

the web page for your extension that links the Extensions API JavaScript library and other JavaScript, CSS, or HTML resources your extension requires

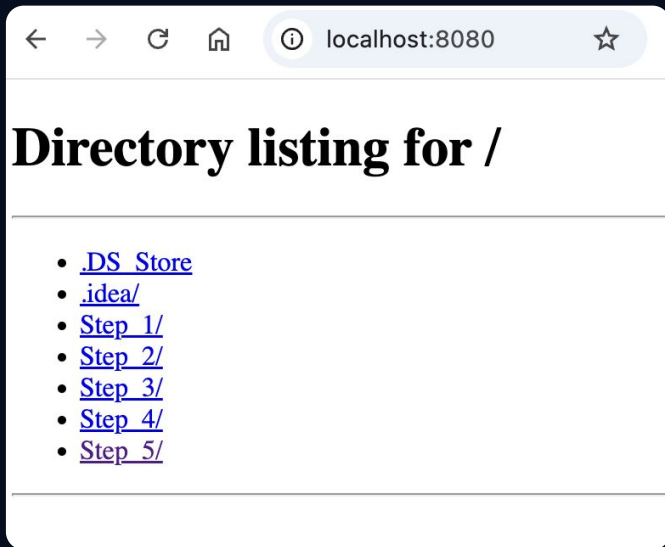

## .js

where you initialize your extension and call Extensions API functions, can use JS libraries such as D3, React, Svelte

# Preparation

1. Run a local web server for storing our viz extension.

```
python -m http.server 8080 -d "/path/to/extension/content/directory"
```

# Preparation

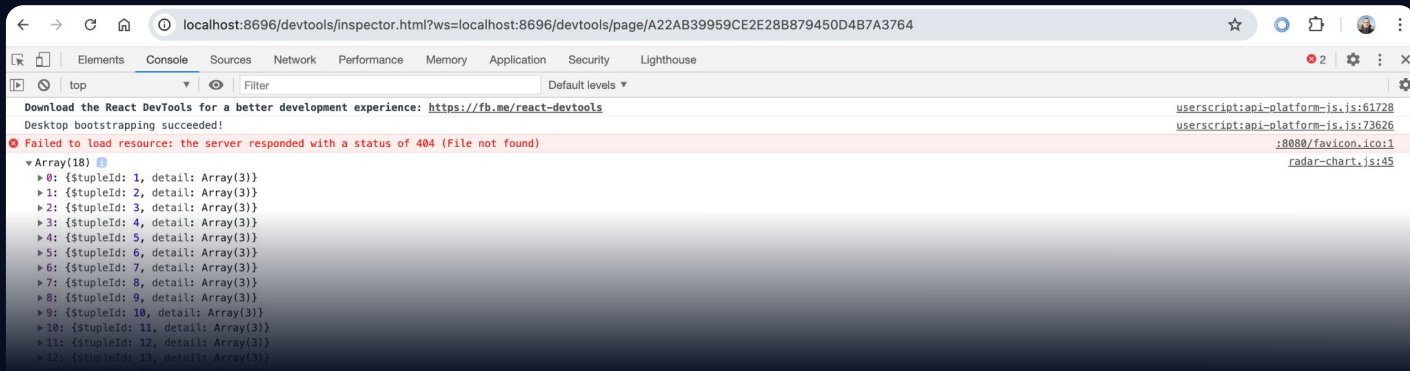

## 2. Open Tableau Desktop in debug mode

[in Mac Terminal]

```
open "/Applications/Tableau Desktop 2024.2.app" --args --remote-debugging-port=8696
```

[in Windows Command Prompt]

```
"C:\Program Files\Tableau\Tableau 2024.2\bin\tableau.exe" --remote-debugging-port=8696
```

# Mission & Data

## Mission:

Create a custom Spider (Radar) chart.

Explore company employees performance by their performance metrics using the new chart type.

## Data:

	A	B	C
1	<b>employee</b>	<b>metric</b>	<b>value</b>
2	Sarah	ethics	0.7
3	Sarah	problem_solving	0.6
4	Sarah	punctuality	0.3
5	Sarah	job_skills	0.8
6	Sarah	communication	0.9
7	Sarah	team_player	1
8	John	ethics	0.4
9	John	problem_solving	0.2
10	John	punctuality	0.8
11	John	job_skills	0.6
12	John	communication	0.8
13	John	team_player	0.8
14	Kevin	ethics	0.1
15	Kevin	problem_solving	0.5
16	Kevin	punctuality	0.2
17	Kevin	job_skills	0.9
18	Kevin	communication	0.1
19	Kevin	team_player	0.5

# Step 1: Empty extension

  <display-name>Axes</display-name>  
  <fields max-count="1"/>  
  <encoding-icon token="text" />  
</encoding>  
<encoding id="values">  
  <display-name>Values</display-name>
```

# Step 5: Extension settings

radar-chart.js

```
        console.error(error.message);
    }
});
}

function configure() { Show usages
    // Code for opening window with settings
    // such as font sizes, area colors, etc.
    // and updating chart after saving settings
}

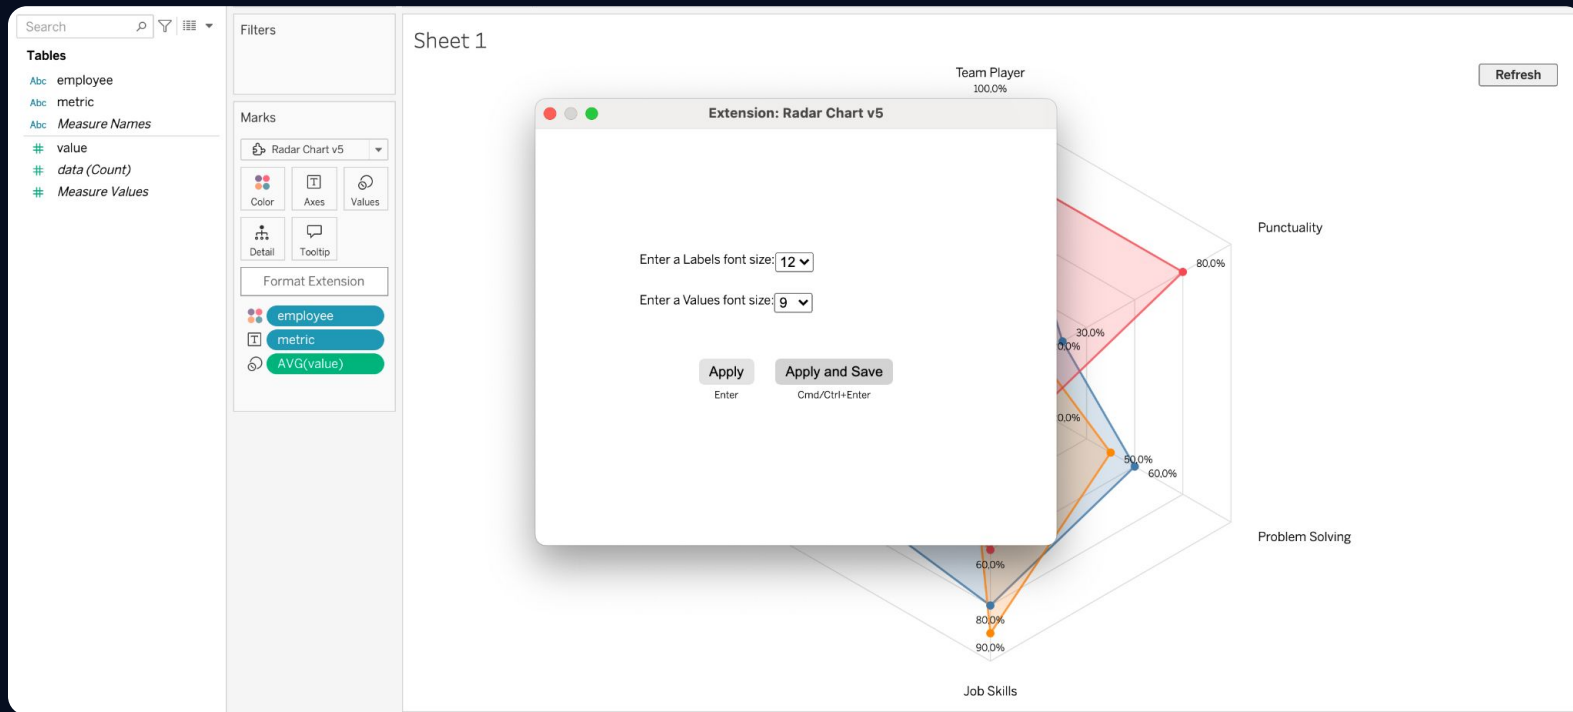

window.onload = async () : Promise<void> => {
    await tableau.extensions.initializeAsync({'configure': configure});
    window.fetchDataAndRender();
    addEventListeners();
};

function getWorksheet() { Show usages
    return tableau.extensions.worksheetContent.worksheet;
```

- + radar-chart-dialog.html
- + radar-chart-dialog.js

# Step 5: Extension settings

## Tableau Desktop

# How to publish it?

- It is not needed to publish it exactly on Tableau Exchange, you can keep using it locally
- You need to set up a web server to provide access to the extension for all your Tableau users  
[ <http://localhost:8080> → <https://your-tableau-extension.com> ]
- You need to adjust your Tableau Server or Tableau Cloud
- Learn more:  
[Tableau Server](#)  
[Tableau Cloud](#)

# Thank you!
